

Understanding InVisionFirst[®] — Lung (Liquid Biopsy)

At NeoGenomics, we understand that you may have a lot of questions about living with advanced non-small cell lung cancer (aNSCLC). We're here to offer information, answers and support.

What is InVisionFirst[®] — Lung?

InVisionFirst[®] — Lung is a liquid biopsy (blood) test used to help you and your care team determine the best course of treatment for you. This is known as precision medicine. The results can be available in as little as 7 days.

Who is InVisionFirst[®] — Lung for?

InVisionFirst[®] — Lung is for individuals who have been diagnosed with aNSCLC. Ask your care team if InVisionFirst[®] — Lung is right for you.*

* A physician's order is required for this test.

What is a biopsy?

As an important part of understanding your cancer and offering you the best care, your doctor may recommend a test called a biopsy.¹ A biopsy can help your cancer care team identify specific markers within your cancer that could be a good target for personalized treatment. There are different types of biopsies:¹

- In a **tissue biopsy**, a specialist doctor removes a small sample of your tumor and looks at it under a microscope. Their goal is to closely assess the sample and gain more insights into your specific cancer.
- If there's not enough tissue, or there's a medical reason a tissue biopsy can't be done, you may receive a test called **liquid biopsy**. Here, a sample of blood is used to help identify if there are any cancer cells circulating in your body.

Your care team may use both tissue and liquid biopsies to help get a complete picture of what's going on in your body.²

Why choose InVisionFirst® — Lung?

Just as we are all unique individuals, your aNSCLC is distinctive to you. InVisionFirst® — Lung can help you and your care team decide how best to treat your specific type of cancer.^{1,2} The InVisionFirst® — Lung liquid biopsy test helps your care team identify actionable mutations within your cancer, so they can take a more targeted approach to your personalized treatment.

In-home Blood Draws

NeoGenomics provides safe and convenient access to liquid biopsy testing through our national mobile phlebotomy program. This service is offered at no cost to patients.

Consider asking the following questions at your next appointment

- How can a liquid biopsy be used in my treatment journey?
- How often can we perform an InVisionFirst® — Lung test during my care?
- How does using the InVisionFirst® — Lung test help us make more informed decisions about my treatment?
- Will the InVisionFirst® — Lung test give us information over time, or just once in my treatment?
- Will I need another tissue biopsy later in my treatment?
- What will the InVisionFirst® — Lung test results tell us?
